# 01

## Overview

# Problem Statement

“Men are from Mars, women are from Venus”

As users from subreddit AskMen and AskWomen expresses themselves differently, how can we accurately differentiate them through the use of languages or words?

# Datasets

## AskMen

“The premier place to ask random strangers about the intricacies of the human condition”

01

## AskWomen

“A subreddit dedicated to asking women questions about their thoughts, lives, and experiences; providing a place where all women can comfortably and candidly share their responses in a non-judgmental space.”

02

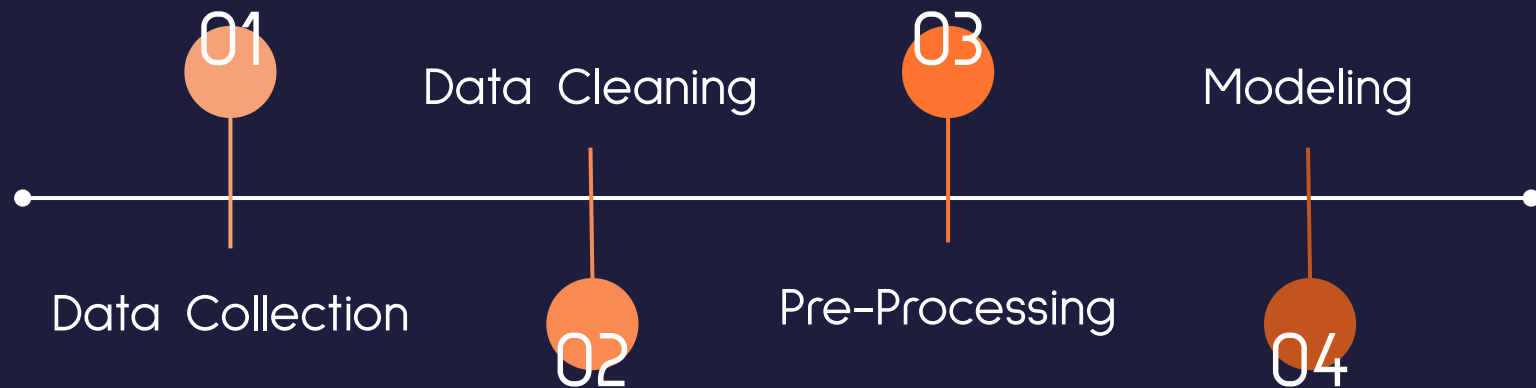

# Modeling Process

# Modeling Process

# Data Collection

Data collection is done using Reddit API

925 Posts

Training Set

555 posts

Testing Set

# Pre-Processing

# Modeling

Modeling was done using pipeline and gridsearch to get the best parameters

	Model	Text Vector	Train Score	Test Score
01	Logistic Regression	Count Vec	0.9272	0.7729
02	Logistic Regression	TF-IDF	0.8792	0.7747
03	Naive Bayes	TF-IDF	0.8080	0.7225

# Model Inferential

# Top 5 Features

Logistic Regression  
(Count Vec)

Askmen	men	surprised	girlfriend	girl	genuinely
AskWomen	ladies	women	late	affect	positive

Logistic Regression  
(TF-IDF)

Askmen	men	guy	girl	girlfriend	advice
AskWomen	women	ladies	partner	learn	story

Naive Bayes  
(TF-IDF)

Askmen	men	just	like	guy	make
AskWomen	women	feel	partner	relationship	ladies

# Evaluation Metric

Logistic Regression  
(TF-IDF)

Naive Bayes  
(TF-IDF)

Sensitivity	Specificity	Precision	Accuracy	ROC Score	TN	FP	FN	TP
0.7878	0.6570	0.6975	0.7225	0.830	182	95	59	219
0.7770	0.7726	0.7742	0.7747	0.845	214	63	62	216

# Distribution of Positives

Classification threshold of 50%

Ask Women •

Ask Men •

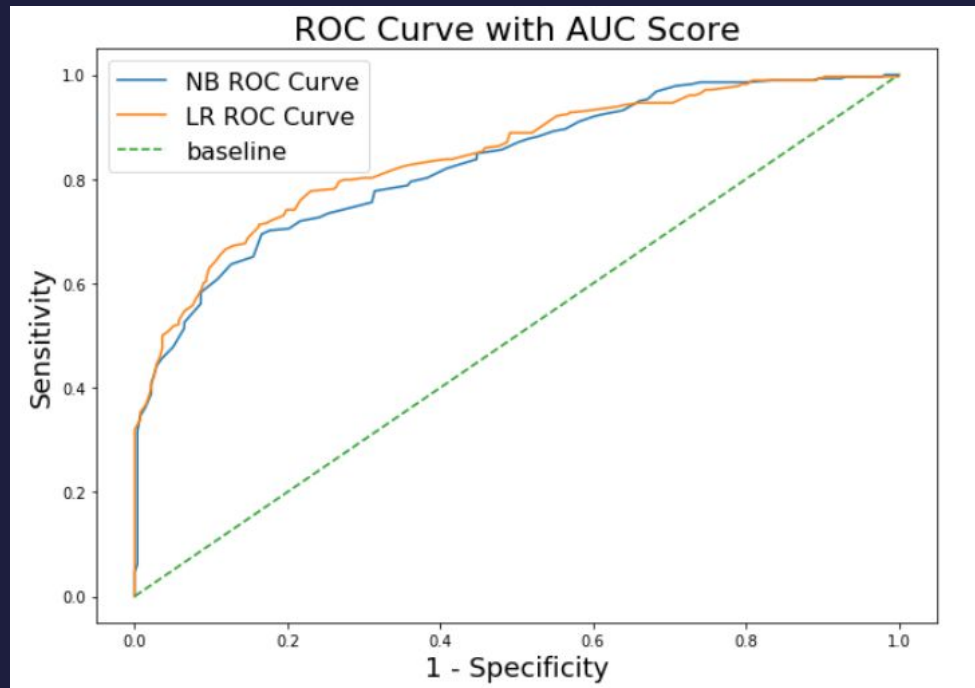

# ROC AUC Score

Naive Bayes •

ROC with AUC score of 0.830

Logistic Regression •

ROC with AUC score of 0.845

# 04

## Conclusion

# Factors to Consider

## Assumptions

Assumption that majority of the AskWomen post is contributed by the women. Likewise for AskMen's posts.

## Phrases

Phrases provides more context than individual words

# Recommendations

## More data

Scrape more data to drive variance down

Refine

## Stop-Words

Add in more language stop-words to the list (e.g. helping verbs) to reduce features

## Eliminate features

Words with extremely low frequency

End of Presentation
